EDUCATION

Texas A&M University

B.S. in Computer Science, Minor in Cybersecurity, GPA: 3.55

Activities: ColorStack, Aggie Coding Club, Texas A&M Computing Society

Relevant Coursework: Software Engineering, Operating Systems, Competitive Programming, Design and Analysis of Algorithms, Data Structures and Algorithms, Artificial Intelligence, Machine Learning, Reverse Software Engineering, Statistics

College Station, TX

Aug. 2024 – Dec. 2026

EXPERIENCE

Software Development Intern

Teamup

Jun. 2025 – Aug. 2025

Remote (Austin, TX)

- Improved user onboarding and navigation by developing a React + Vite landing page, OAuth-aware navbar, and account editor, increasing feature accessibility and reducing user friction
- Increased frontend reliability by implementing 9 Vitest test suites for authentication and navigation flows, reducing regression-related bugs during deployment
- Accelerated feature delivery by collaborating in Agile sprints, code reviews, and Git workflows, supporting on-time releases across cross-functional teams

LEADERSHIP

ColorStack at Texas A&M University

Secretary

May 2025 – Present

College Station, TX

- Increased technical interview readiness by organizing weekly LeetRoom sessions for 10–15 members focused on algorithmic problem solving
- Expanded chapter visibility by leading development of a responsive website with interactive components, boosting student engagement across 3+ pages
- Strengthened community retention by coordinating 5+ professional and social events serving 40+ members
- Improved sponsor outreach by compiling and distributing a 40-member resume book, enabling direct internship and recruiting connections

PROJECTS

Theo | *JavaScript, React.js, Vite.js, HTML, CSS, Vitest, Python, Django, Google OAuth*

- Built a full-stack tutoring marketplace with scheduling, payments, and role-based access, supporting tutor–tutee matching and booking workflows
- Developed a React + Vite frontend and Django backend to enable profile management and conditional navigation for multiple user roles
- Improved platform stability by implementing 9 Vitest test suites, ensuring reliable MVP deployment

Coinvo | *HTML, CSS, JavaScript, Python, Flask, FastAPI, OpenAI API*

2nd @ TAMUhack 2025

- Secured 2nd place among 10 teams by building an AI-powered financial analytics platform with real-time stock insights
- Enhanced usability by designing 5 interactive UI components for submitting queries and receiving investment recommendations
- Improved response accuracy by integrating OpenAI APIs with secure Flask backend services and live data pipelines

Pinsafe | *React, Vite, Tailwind, FastAPI, SQLite, OpenAI API*

- Built a responsive community-driven safety platform by developing a React + Vite + Tailwind frontend with interactive maps and AI-assisted insights
- Designed and implemented map and chatbot interfaces using React-Leaflet and OpenAI APIs, enabling real-time incident visualization and contextual safety analysis
- Integrated frontend features with FastAPI and SQLite backend services, ensuring reliable data retrieval and accurate AI-powered responses

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript, HTML, CSS, Java, SQL, R

Frameworks & Libraries: React, Vite, Flask, Django, FastAPI, Vitest, Node.js, JUnit

Tools & Technologies: Git, GitHub, Docker, Linux, Figma, VSCode, OpenAI API, Google OAuth, MySQL, SQLite
